制作STM32F429的外部SPI-FLASH下载算法

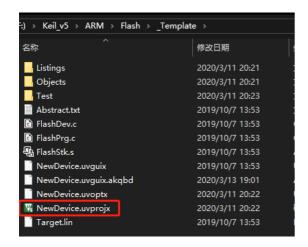

联系作者:

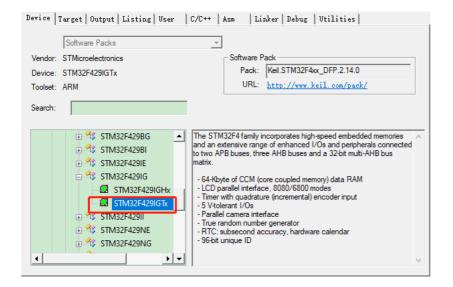

加我微信,备注"加群",加入技术交流群

下载算法的模版在keil安装目录\ARM\Flash下的_Template文件夹,把此文件夹复制出来,进行修改。也 可以自行修改此工程名。

打开此工程,选择自己的芯片类型:

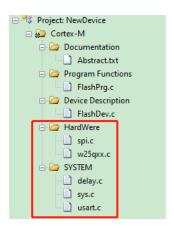

添加W25QXX的驱动代码:

去正点原子的论坛下载STM32F29的寄存器工程,拷贝出HARDWARE文件夹下的SPI和W25QXX驱动,和SYSTEM文件夹。

添加W25QXX的驱动

修改FlashDev.c 中外部flash的大小:

```
#include "FlashOS.H"
                          // FlashOS Structures
1
2
3
4
  struct FlashDevice const FlashDevice = {
5
     FLASH_DRV_VERS,
                            // Driver Version, do not modify!
6
     "STM32F429_W25QXX",
                             // Device Name
7
     EXTSPI,
                             // Device Type
8
     0x90000000,
                             // Device Si
                                          Maddin Wang 关注
                                                                                   9
     0x01000000.
                             // Device S
```

```
10
       4096,
                                   // Programming Page Size
11
                                   // Reserved, must be 0
       0,
12
       0xFF.
                                   // Initial Content of Erased Memory
                                    // Program Page Timeout 100 mSec
13
       1000.
14
       3000,
                                   // Erase Sector Timeout 3000 mSec
15
16
    // Specify Size and Address of Sectors
17
       0x001000, 0x000000,
                                 // Sector Size 4kB (8 Sectors)
18
       SECTOR_END
19 };
```

修改FlashPrg.c,按照模版添加驱动代码:

56

57

De-Initialize Flash Programming Function

fnc: Function Code

Parameter:

```
#include "FlashOS.H"
                               // FlashOS Structures
 2
    #include "sys.h"
    #include "delay.h"
 3
    #include "w25qxx.h"
 4
    #include "spi.h"
    #include "usart.h"
 6
 7
 8
    #define PAGE_SIZE
                                4096
 9
10
       Mandatory Flash Programming Functions (Called by FlashOS):
11
                    int Init
                                 (unsigned long adr, // Initialize Flash
                                    unsigned long clk,
12
                                   unsigned Long fnc);
13
                    int UnInit
                                   (unsigned long fnc); // De-initialize Flash
14
15
                    int EraseSector (unsigned long adr); // Erase Sector Function
16
                    int ProgramPage (unsigned long adr, // Program Page Function
17
                                    unsigned long sz,
18
                                    unsigned char *buf);
19
       Optional Flash Programming Functions (Called by FlashOS):
20
21
                    int BlankCheck (unsigned long adr, // Blank Check
22
                                    unsigned long sz,
23
                                    unsigned char pat);
24
                    int EraseChip
                                   (void);
                                                        // Erase complete Device
25
          unsigned long Verify
                                    (unsigned long adr, // Verify Function
26
                                    unsigned long sz,
27
                                    unsigned char *buf);
28
29
           - BlanckCheck is necessary if Flash space is not mapped into CPU memory space
                     is necessary if Flash space is not mapped into CPU memory space
30
           - if EraseChip is not provided than EraseSector for all sectors is called
31
32
33
34
35
     * Initialize Flash Programming Functions
36
37
          Parameter:
                         adr: Device Base Address
38
                         clk: Clock Frequency (Hz)
                         fnc: Function Code (1 - Erase, 2 - Program, 3 - Verify)
39
40
          Return Value: 0 - OK, 1 - Failed
41
     */
42
    uint8_t aux_buf[PAGE_SIZE];
43
    uint32_t base_adr;
44
    int Init (unsigned long adr, unsigned long clk, unsigned long fnc) {
45
      /* Add your Code */
46
        Stm32_Clock_Init(360,25,2,8);//设置时钟,180Mhz
47
48
        delay_init(180);
                                  //初始化延时函数
49
        //uart_init(90,115200);
                                   //初始化串口波特率为115200
                                   //W25QXX初始化
50
        W25QXX_Init();
                                                    // Finished without Errors
51
        return (0);
52
53
54
55
```

```
Return Value: 0 - OK, 1 - Failed
 58
 59
 60
     int UnInit (unsigned long fnc) {
 61
 62
 63
       /* Add your Code */
 64
       return (0);
                                                  // Finished without Errors
 65
 66
 67
 68
      * Erase complete Flash Memory
 69
 70
          Return Value: 0 - OK, 1 - Failed
 71
 72
 73
     int EraseChip (void) {
 74
 75
       /* Add your Code */
 76
        W25QXX_Erase_Chip();
 77
       return (0);
                                                  // Finished without Errors
 78
 79
 80
 81
      * Erase Sector in Flash Memory
 82
 83
          Parameter: adr: Sector Address
 84
          Return Value: 0 - OK, 1 - Failed
 85
 86
 87
     int EraseSector (unsigned long adr) {
 88
 89
       /* Add your Code */
 90
         W25QXX_Erase_Sector((adr-base_adr)/4096);
                                                  // Finished without Errors
 91
       return (0);
 92
 93
 94
 95
      * Program Page in Flash Memory
 96
 97
                         adr: Page Start Address
          Parameter:
 98
                          sz: Page Size
 99
                          buf: Page Data
100
          Return Value: 0 - OK, 1 - Failed
101
102
103
     int ProgramPage (unsigned long adr, unsigned long sz, unsigned char *buf) {
104
       /* Add your Code */
105
        W25QXX_Write_NoCheck(buf,adr-base_adr,sz);
106
                                                  // Finished without Errors
107
       return (0);
108
     }
109
110
      * Blank Check Checks if Memory is Blank
111
          Parameter:
                         adr: Block Start Address
                               Block Size (in bytes)
112
113
                          pat: Block Pattern
          Return Value: 0 - OK, 1 - Failed
114
115
116
     int BlankCheck (unsigned long adr, unsigned long sz, unsigned char pat) {
117
118
         return (1);
                                                          /* Always Force Erase */
119
120
                              (unsigned long adr, // Verify Function
     unsigned long Verify
121
                               unsigned long sz,
122
123
                               unsigned char *buf)
124 {
125
            return 0;//直接返回0, 表示成功
126 }
```
